PROGRAM DETAILS · 7-DAY INTENSIVE · AGES 12+

# Design Your Life Intensive

## Decision-making and goal-setting

*For students aged 12+ — and the parent who will actually read this — who want the child to start making their own decisions.*

Not a fit if you want tutoring, a certificate for the résumé, or a plan the parent wrote. We teach the student to do the work. The plan is theirs.

## The promise

**For the first time in 12, 13, 14 years, they sit down and plan their own year — and the shape of the next few — on purpose. Not because a parent said so. Not because a teacher said so. Because they chose it.**

They leave with three goals that survive a sceptical adult, a year map they can actually use, one daily ritual small enough that they will do it, and a review rhythm so the plan does not die in week two.

If they finish the seven days without a complete Annual Plan, we refund.

| Item | This intensive |
|---|---|
| **Duration** | 7 days · 1 hour a day · live |
| **Ages** | 12+ |
| **Cohort** | ₹6,500 per student · small live group |
| **1-on-1** | ₹9,500 per student · private with Atray |
| **Led by** | Atray Agrawal — not a rotating set of guest tutors |
| **They leave with** | Annual Plan, year calendar, scorecard, one ritual, review cadence |

## Two skills that do not go out of fashion

Schools teach compliance. Parents want independence. In between, the student freezes on choices, outsources direction, or drifts into whatever is easiest.

Decision-making is a skill. Goal-setting is a skill. Both can be taught.

| Skill | What they actually learn |
|---|---|
| **Decision-making** | Why decisions compound. How to make better ones. First principles, inversion, bottlenecks, leverage, one-way vs two-way doors — applied to their own life, not a textbook problem. |
| **Goal-setting** | They write goals that are theirs. Then we turn those into a year map: what to do, what to ignore, and a review rhythm so the plan keeps moving. |

*These two skills are how a student starts becoming independent and responsible.*

## Mental models they actually use

Taught in the room, then used on their own goals the same hour. Not a lecture series.

| Model | What it is for |
|---|---|
| **Pareto 80/20** | A handful of things make most of the difference. They cut the list. |
| **First principles** | Strip a goal to what is actually true, not what sounds impressive. |
| **Divergent → convergent** | Brainstorm 25 wants. Then choose 3. |
| **SMART + BHAG** | Two stretch goals they can hit. One Big Hairy Audacious Goal that scares them a little. |
| **Inversion** | “What would make sure I fail?” Then they design around that. |
| **Thought experiments** | Try two futures in the head before committing to one. |

| | |
|---|---|
| **One-way vs two-way doors** | Most decisions are reversible — move. A few are not — slow down, then commit. |
| **Quantization** | Life moves in packets. For them, the packet is a daily ritual. |
| **Leverage + flywheel** | The one habit that makes everything else easier. The 20-mile march. |
| **Compounding** | Small daily actions, stacked. Identity: "I am the kind of person who…" |
| **Feedback loop** | Hypothesis → action → result → review → improve. |

*A firm decision stands until Review. Hardship is not a reason to quit. Wrong direction is.*

## The 7 days

Seven live sessions, one hour each. Part teaching. Part work. Every day closes with a short visualisation and an identity-based affirmation, so the future they just designed is felt, not only written.

| Day | Focus | They produce |
|---|---|---|
| **1. Inventory** | Success vs planning. Dreams vs goals. Where current habits actually take them. Stick-figure map of Be / Do / Have — current state. Journal + first review. | A clear picture of today, and why decisions matter |
| **2. The 25 and the 3** | Divergent thinking: 25 wants. Convergent: 3 goals for the next year, with deadlines. Two stretch, one BHAG. Write the why. | Three named goals + reasons |
| **3. Bull's Eye** | Describe each goal in detail. Vision board in the journal. Inversion: how this fails. Thought experiment: how it happens. Milestones, resources, support. | A Bull's Eye action plan for each of the 3 |
| **4. Ritual + flywheel** | Quantize each goal into one daily action. Leverage. Compounding. One ritual so small it is hard to skip — the 20-mile march. Draw the future self. | One daily ritual per goal, plus the identity statement |
| **5. Scorecard** | Personal responsibility, in numbers. Weekly scorecard. Daily tracker. Feedback loop. | A working scorecard they can fill this week |
| **6. Year map** | Annual calendar. Personal dates first, then goal dates, then reviews. Vision / mission / values / code of conduct if they are ready. | A living year calendar |
| **7. Declaration** | Review the week. Declare: I believe I can. I will. Until it is finished. Then surrender: detach from the outcome, keep the process. | A signed declaration + a plan they own |

*A typical hour: 5 minutes check-in and yesterday's review · decision-making concept · goal-setting work on their own plan · 10 minutes review · close with affirmation and visualisation (current self → future self).*

Homework is light and specific (photos, words, references for the vision board). The heavy work happens in the hour.

Led by Atray Agrawal — not a rotating set of guest tutors.

## How the work is split

They do the thinking. We hold the frame. A plan a parent dictated will not survive week two.

| Stage | Done for them | Done with them | They do |
|---|---|---|---|
| **Clarity** | Name the patterns in how they decide | Stick-figure current state. Dreams vs goals. | Tell the truth about where they actually are |
| **The 3 goals** | Kill vague wishes. Push for specific and dated. | 25 → 3. SMART vs BHAG. Pressure-test the why. | Choose. Write. Own the three. |
| **The plan** | Templates: Bull's Eye, scorecard, calendar, review questions | Inversion, milestones, the one ritual | Fill, revise, defend the plan |

| | | | |
|---|---|---|---|
| **Follow-through** | Review cadence (daily → yearly) and the declaration script | Scorecard and calendar built live | Track. Review. Keep the ritual. |

*In the cohort, peers red-team the plan and an accountability pair is formed on day 7. In 1-on-1, the same curriculum, with the examples, pace, and privacy built around that one student.*

## What they walk away with

A working system. Not a certificate.

- A bound Annual Plan in their journal: past audit, 3 Rocks (1 BHAG + 2 SMART), reasons, inversion, milestones.
- Bull's Eye action plans for each goal — how, fail-modes, resources, support.
- One leverage ritual per goal, identity-based, small enough to do on a bad day.
- Weekly scorecard + daily tracker — planned vs actual, in numbers.
- A living year calendar — personal dates, goal dates, sacred review dates.
- A review rhythm they can keep: daily (10–15 min), weekly (25 min), monthly (1 hr), quarterly, yearly.
- A written declaration — belief, commitment, until-it-is-finished — then surrender to the process.
- The mental models above, which they keep after day 7.

*What they do not walk away with: a parent-approved career, a guaranteed grade, or a personality transplant. Those are not ours to sell. They walk away able to decide, and able to set a direction they will actually follow.*

## Who this is for

### The student

- Aged 12+, in IB, IGCSE, A-Levels, CBSE, or a strong independent school.
- Freezes on choices, outsources them, or has never sat down and planned a year that is theirs.
- Willing to show up for seven hours, write honestly, and do a small amount of work between sessions.
- High-achievers who are excellent at following a syllabus and weak at setting their own.

### The parent

- Wants the child to make their own decisions, and is willing to let the goals be the child's.
- Fine with a 15-minute Readiness Call before you pay. This is not a Buy Now button.

### Not a fit

- Under 12. The work does not stick the same way.
- The student will not show up, or the family wants us to "handle it."
- You want grades, test prep, or a college-admissions package.
- You need the child to pick a career this week.

*Design Your Life is clarity. Future Founders Bootcamp is build-and-sell. The Fellowship is mentorship for a global competition. This is the first rung if they do not yet have direction.*

## Who is in the room with them

**Atray Agrawal**, Founder of Cosmic Essence Education. About · YouTube.

Eight years teaching teenagers. Five ventures of his own (including Kythera — a 1,000+ member arts-wellness community, built without ad spend). 195+ students. Students from his programs have gone on to UChicago, Duke, Parsons, Pratt, SAIC, Indiana, Wisconsin, Leeds, Leicester, and Birmingham.

Featured in Times of India, DNA, and City Radio.

He teaches entrepreneurship through physics because the same laws show up in businesses, in habits, and in the way a life actually moves. This intensive is the first rung — clarity before they try to build anything.

*"I've gotten immense clarity about my goals through this intensive. I'm super clear and excited about my future now!"*
— Ayana Sharma, Grade 8, Uday Waldorf Inspired School

*"My child came home actually excited about planning. Not just homework — their own goals. That shift from 'I have to' to 'I want to' is everything."*
— Parent, Jaipur

*"Atray didn't just give me strategies — he changed how I think about business. The physics lens is unlike anything else I've encountered."*
— Eli Finer

## Proof you can click

1. **The Design Your Life page** — the public version of this offer.
2. **About Atray** — teaching record and placements.
3. **Atray on YouTube** — hear how he teaches before you put a child in the room.
4. On the Readiness Call we can share student work samples from a recent intensive (journal pages, scorecard, calendar). We do not park private student work in a public doc.

## The risk, removed

**1. A 15-minute Student Readiness Call first.** Parent and student, with Atray. If it is not a fit, you will hear that on the call.

**2. Annual Plan promise.** They finish the seven days with a complete Annual Plan they wrote, or we refund.

**3. Student declaration** (the student says this, not the parent): "I believe I can. I will commit. I will do this until it is finished. Then I will follow the process and let the result come."

**4. What we will stand behind, in writing.** Seven live hours. The system above. The refund if the plan is not in their hands at the end.

What we will not stand behind: they hit every goal, they never procrastinate again, or a particular grade / college / career.

## The investment

| | Cohort | 1-on-1 |
|---|---|---|
| **Investment** | ₹6,500 per student | ₹9,500 per student |
| **Who is in the room** | Small live group. Peer challenge. | The student and Atray. No audience. |
| **Pace** | Shared. They still do their own plan. | Built around their life, school calendar, and the three goals that actually matter to them. |
| **Best when** | They learn well with peers, and you want the energy of a room. | The student needs privacy, a different pace, or the work is too personal for a group. |
| **Card (+3%)** | ₹6,695 | ₹9,785 |

UPI / NEFT / IMPS at the listed price. Credit or debit card: +3% processing.

On the call, one email goes to the parent: the terms, the amount, and the bank details. The parent replies to confirm. Payment holds the seat. Dates are locked once the amount has cleared.

## How a family starts

1. **Book a 15-minute Student Readiness Call** — parent and student, with Atray.
2. If it is a fit, pick cohort or 1-on-1. Dates are given on the call.
3. **One email** goes to the parent: terms, amount, bank details. Payment holds the seat.

4. Journal prompts are sent before day 1. They show up. They write. They leave with the plan.

## Questions parents actually ask

**What age is this for?** 12 and up. Younger than that, the work does not stick the same way. Mixed cohorts are fine — older students often pull the younger ones up.

**My child already does well in school. Why this?** This is not tutoring. High-achievers are often excellent at following directions and weak at setting their own. That gap shows up later, when nobody is handing them a syllabus.

**They don't know what they want.** That is a good reason to come. Day 2 is 25 wants, then 3. Day 3 is thought experiments — try a future on before they commit to it.

**Cohort or 1-on-1?** Cohort if they work well with peers and you want the cheaper seat. 1-on-1 if the goals are private, the calendar is awkward, or they need the room to themselves. Same seven days. Same artefacts.

**Will they actually use this after day 7?** The review dates are marked on the calendar before they leave. The ritual is small on purpose. We cannot sit in their room in November. We can install a system that still works if they use it.

**What if they miss a day?** Tell us before. In a cohort we catch them up in a short slot. In 1-on-1 we move that hour. Missing two days without notice, and the refund promise no longer applies — the plan is built in sequence.

**Can parents sit in?** No. The student needs the room. You get a parent note at the end: what they built, and how to support it without taking it over.

**Is this the same as the Bootcamp or the Fellowship?** No. Design Your Life is clarity. Bootcamp is build-and-sell (8 weeks). Fellowship is mentorship for a named global competition (4.5 months). Start here if they do not yet have direction.

**Who is Cosmic Essence?** A boutique education studio in Jaipur that teaches entrepreneurship through physics to ambitious 12–18 year olds. Not a tutoring company. Not test prep. Not college-admissions coaching.

### Seven days. If they have never planned their own year, this is the place to start.
